1.0 INTRODUCTION

The purpose of this document is to present public comments and responses to comments received on the Draft Environmental Impact Report (EIR) (State Clearinghouse Number 2024070062) for the South El Monte Athletic Fields and Business Park Project (Project) located in the City of South El Monte (City). The Draft EIR was released for public review and comment by the City for a 45-day review period that occurred between August 28, 2025 and October 13, 2025.

In accordance with the California Environmental Quality Act (CEQA) Guidelines Section 15088, the City of South El Monte, as the Lead Agency, has evaluated all substantive comments received on the Draft EIR, and has prepared written responses to these comments. This document has been prepared in accordance with CEQA and represents the independent judgment of the Lead Agency.

1.1 Format

The Final EIR for the South El Monte Athletic Fields and Business Park Project consists of the Draft EIR and its technical appendices; the Responses to Comments included herein; other written documentation prepared during the EIR process; and those documents which may be modified by the City Council at the time of consideration of certification of the Final EIR. The City Council would also consider adoption of a Mitigation Monitoring and Reporting Program (MMRP), a Statement of Findings of Fact, and a Statement of Overriding Considerations as part of the approval process for the Project.

This Response to Comments document is organized as follows:

Section 1 Provides a brief introduction to this document.

Section 2 Identifies the Draft EIR commenters.

Section 3 Provides responses to substantive comments received on the Draft EIR. Responses are provided in the form of individual responses to comment letters received. Comment letters are followed immediately by the responses to each letter.

Section 4 Presents clarifications to the Draft EIR, identifying revisions to the text of the document.

1.2 CEQA Requirements Regarding Comments and Responses

CEQA Guidelines Section 15204(a) directs persons and public agencies to focus their review of a Draft EIR be "on the sufficiency of the document in identifying and analyzing possible impacts on the environment and ways in which significant effects of the Project might be avoided or mitigated. Comments are most helpful when they suggest additional specific alternatives or mitigation measures that would provide better ways to avoid or mitigate the significant environmental effects. At the same time, reviewers should be aware that the adequacy of an EIR is determined in terms of what is reasonably feasible. …CEQA does not require a lead agency to conduct every test or perform all research, study, and experimentation recommended or demanded by commenters. When responding to comments, lead agencies need only respond to significant environmental issues and do not need to provide all information requested by reviewers, as long as a good faith effort at full disclosure is made in the EIR."

CEQA Guidelines Section 15204(c) further advises, "Reviewers should explain the basis for their comments, and should submit data or references offering facts, reasonable assumptions based on facts,

or expert opinion supported by facts in support of the comments. Pursuant to CEQA Guidelines Section 15064, an effect shall not be considered significant in the absence of substantial evidence." Section 15204(d) states, "Each responsible agency and trustee agency shall focus its comments on environmental information germane to that agency's statutory responsibility." CEQA Guidelines Section 15204(e) states, "This section shall not be used to restrict the ability of reviewers to comment on the general adequacy of a document or of the lead agency to reject comments not focused as recommended by this section."

CEQA Guidelines Section 15088(a) states that the "The lead agency shall evaluate comments on environmental issues received from persons who reviewed the draft EIR and shall prepare a written response. The lead agency shall respond to comments raising significant environmental issues received during the noticed comment period and any extensions and may respond to late comments." Section 15088(c) notes "The written response shall describe the disposition of significant environmental issues raised (e.g., revisions to the proposed project to mitigate anticipated impacts or objections). In particular, the major environmental issues raised when the lead agency's position is at variance with recommendations and objections raised in the comments must be addressed in detail giving reasons why specific comments and suggestions were not accepted. There must be good faith, reasoned analysis in response. Conclusory statements unsupported by factual information will not suffice. The level of detail contained in the response, however, may correspond to the level of detail provided in the comment (i.e., responses to general comments may be general). A general response may be appropriate when a comment does not contain or specifically refer to readily available information, or does not explain the relevance of evidence submitted with the comment."

In accordance with CEQA, Public Resources Code Section 21092.5 requires that copies of the written responses to public agencies be provided to those agencies at least ten days prior to certifying the EIR by the South El Monte City Council. It is the City's policy to provide notification of the availability of written responses to comments to all parties providing comments on the Draft EIR. Further, the City provides such notification prior to first consideration of a project by the Planning Commission.

2.0 LIST OF RESPONDENTS

In accordance with the State CEQA Guidelines Section 15132, the following is a list of public agencies that submitted comments on the Draft EIR received as of close of the public review period on October 13, 2025. No organizations, individuals, or businesses provided comments on the Draft EIR.

Comments have been numbered and responses have been developed with corresponding numbers.

Letter Reference	Commenter	Date of Correspondence	Page No.
Agencies (A)			
A1	California Department of Fish and Wildlife	September 24, 2025	5
A2	California Department of Fish and Wildlife	September 29, 2025	7
A3	South Coast Air Quality Management District	September 24, 2025	11
A4	South Coast Air Quality Management District	October 10, 2025	13
A5	California Department of Transportation, District 7	October 13, 2025	33

3.0 RESPONSES TO ENVIRONMENTAL COMMENTS

This section is formatted so that the respective comment letters are followed immediately by the corresponding responses. Comment letters and specific comments are given letters and numbers, respectively, for reference purposes. Where sections of the Draft EIR are excerpted in this document, the sections are shown indented. Changes to the EIR text are shown in underlined text for additions and ~~strikeout~~ for deletions.

Letter A1 California Department of Wildlife

September 24, 2025

From: Gerardo Marquez
To: Privitt, Dana; Sedoff, Addie
Subject: Department of Wildlife DEIR Inquiry
Date: Wednesday, September 24, 2025 3:12:46 PM
Attachments: Outlook-otkhdnve.png
Outlook-Title_Fac.png
Outlook-Title_ins.png
Outlook-Title_Twi.png

Good afternoon,
A gentleman from the Department of Wildlife reached out and only had 2 questions: Answers in red

Was this CEQA document also taking into consideration the park component? YES

Will the park be completed by the applicant or at a later date? PARK COMPONENT WILL BE A FUTURE PROJECT UNDERTAKEN BY THE CITY.

A1-1

Best,

Gerardo Marquez
Director of Community
Development & Public Works

Phone: 626- 579-6540

1415 Santa Anita Avenue
South El Monte, CA 91733

www.cityofsouthelmonte.org

City Hall is closed Fridays and major holidays.

Response A1-1

The commenter asked whether the Draft EIR evaluated the future City park component of the Project and timing and responsibility for construction.

As identified in Chapter 3.0: Project Description of the Draft EIR, approximately 10.7 acres on the northwestern portion of the site would be dedicated to the City pursuant to either a long-term ground lease or property donation agreement for future development of a City park. On page 3-14, the EIR outlines future City park components and states the EIRR analysis and technical studies evaluated a conservative conceptual plan for the development of the future City park. This comment does not raise a substantive issue regarding the content of the EIR, the comment has been noted for the record.

Subject: CDFW Comments on 2024070062 South El Monte Business Park and Athletic Fields DEIR

You don't often get email from riley.scott@wildlife.ca.gov. Learn why this is important

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Gerardo Marquez,

The California Department of Fish and Wildlife (CDFW) has completed our review of the Draft Environmental Impact Report (DEIR) for the South El Monte Business Park and Athletic Fields Project (Project). The Project proposes the development of a warehouse on 10.5 acres and a conceptual park on 10.7 acres of an approximately 21-acre parcel. The Project would also include parking, landscaping, a digital billboard, and storm water utility construction and improvements. The Project is expected to take approximately 12 months. We appreciate the incorporation of our comments and revisions into the DEIR.

A2-1

CDFW offers the comments and recommendations below to assist City in adequately identifying and/or mitigating the Project's significant, or potentially significant, direct and indirect impacts on fish and wildlife (biological) resources.

Night Lighting: According to the DEIR, the Project proposes the implementation of lighting throughout the site at night seven days a week. Additionally, the DEIR appears to suggest the digital billboard constructed as part of the project will also operate throughout the night. Artificial night lighting can affect plants and wildlife through attraction and disorientation, loss of connectivity, interference with pollination and foraging, and disruption of circadian rhythms and lunar and seasonal cycles (Barrientos et al. 2023). CDFW recommends the DEIR evaluate lighting impacts, especially nighttime lighting, on wildlife species and biological resources within the Project area during the construction and operational phases. CDFW also recommends the County prepare a lighting plan that discusses the criteria used in selecting the types of light fixtures, a schedule detailing the hours various lights will be on, and steps taken by the County to minimize adverse effects on wildlife species. Methods for minimizing adverse effects of artificial night lighting include lighting only where light is necessary, turning lights off when they are not in use (e.g., motion detector), only using as much light as is needed, directing the light only where it is needed, and using the lowest possible correlated color temperature for the goal of the lighting.

A2-2

Native Plant Palette: CDFW recommends the final environmental document update the Project's landscaping plant palette list. CDFW recommends the Project proponent use only native species found in naturally occurring vegetation communities within or adjacent to the Project area. The Project proponent should not plant, seed, or otherwise introduce non-native, invasive plant species to areas that are adjacent to and/or near native habitat areas. Accordingly, CDFW recommends the Project restrict use of any species, particularly 'moderate' or 'high' listed by the California Invasive Plant Council (Cal-IPC 2025). These species are documented to have substantial and severe ecological impacts on physical processes, plant and animal communities, and vegetation structure.

A2-3

If you have any questions or concerns, please feel free to reach out. Thank you for the opportunity to review and comment on the Project.

A2-4

Best,

Riley Scott

Response A2-1

This comment provides an introduction to the letter from the California Department of Fish and Wildlife (CDFW). The comment is introductory in nature and does not raise a specific issue with the adequacy of the Draft EIR or raise any other CEQA issue. Therefore, no further response is required.

Response A2-2

CDFW's comments regarding nighttime lighting effects on wildlife are acknowledged. The Draft EIR adequately analyzes these issues in both the Biological Resources and Aesthetics sections.

As summarized in Section 4.3: Biological Resources of the Draft EIR, the burrowing owl is a protected wildlife species that could occur on or near the project site, and the operational lighting from the future City park could affect the burrowing owl if present nearby, and identifies this as a potentially significant impact. To address this, the EIR incorporates Mitigation Measure (MM) AES-1, which requires any directional lighting to be designed and sited to avoid illuminating adjacent open space and restricts lighting use to specified time periods. This mitigation measure is intended to prevent spillover lighting and avoid reduction in hunting efficiency or increased predation risk for the burrowing owl, if present.

As explained in the Draft EIR, four focused breeding season surveys for western burrowing owls were conducted within accessible suitable habitat between March 24 and June 25, 2025, in accordance with the Burrowing Owl (BUOW) Guidelines and within the species' breeding season (CDFW, 2012). Presence/absence of burrowing owls within the survey area was assessed by analyzing the presence of suitable burrows and searching for live burrowing owls and the sign of recent burrowing owls. No burrowing owls were identified. As addressed in Section 4.3: Biological Resources, based on the general biological survey on April 21, 2023, the rare plant survey on July 27, 2023, the reconnaissance non-breeding season burrowing owl survey on November 15, 2024, and four focused breeding season surveys in 2025, the project site seasonally supports suitable habitat for burrowing owl, however suitability can vary dependent on weed management. As explained in the Draft EIR, considering site suitability and the presence of the symbiotic California ground squirrel and burrows, the project site has a moderate potential to support burrowing owls.

Additionally, Section 4.1: Aesthetics, of the Draft EIR further describes the stadium lighting assumptions and explains that all park lighting would use fully shielded, downward-directed fixtures; comply with applicable City Municipal Code lighting controls; operate only until 10:00 PM; and meet the performance criteria summarized in MM AES-1 (e.g., full cutoff fixtures, shielding, dimming, intensity limits, and automatic shut-off). Included as Appendix B: Lighting Analysis to the Draft EIR, the stadium lighting for the future City park area would not result in light spill at the property line greater than 0.3 footcandle). Accordingly, the analysis concludes that the proposed lighting would not cause substantial off-site light exposure that could result in a significant impact to wildlife species. The Draft EIR also includes MM AES-2, which establishes strict lighting and brightness controls for the digital billboard, including photocell dimming and compliance with Caltrans requirements under the Highway Beautification Act of 1965 (23 U.S.C. 131), the California Outdoor Advertising Act, and the California Vehicle Code. Accordingly, the Draft EIR sufficiently evaluates potential night lighting impacts on wildlife, including but not limited to the burrowing owl. No evidence has been provided to the contrary. No changes to the EIR required; no further response is required.

Response A2-3

CDFW's recommendation regarding the use of native, non-invasive plant species for landscaping is acknowledged. As described in Section 4.3: Biological Resources of the Draft EIR, the project site primarily supports disturbed and non-native grassland vegetation, with no sensitive vegetation communities or native habitats present on-site. The Draft EIR incorporates MM BIO-3, which requires the applicant to avoid use of invasive plant species, prohibits all Cal-IPC "Moderate" and "High" rated species, and requires removal of any invasive species found on site. MM BIO-3 also directs the applicant to use State-recognized native plant resources (e.g., Calscape, CNPS) when selecting replacement species. These requirements ensure that landscaping will not introduce invasive plants or adversely affect nearby open space. This comment does not raise a substantive issue regarding the content or adequacy of the Draft EIR, no further response is required and this comment is noted for the record.

Response A2-4

This comment provides a conclusion to the letter from CDFW. This comment does not raise a specific issue with the adequacy of the EIR or raise any other CEQA issue. Therefore, no further response is required.

Letter A3 South Coast Air Quality Management District (SCAQMD)

Jivar Afshar, Air Quality Specialist
September 24, 2025

From: Jivar Afshar <jafshar@aqmd.gov>
Sent: Wednesday, September 24, 2025 2:49 PM
To: Gerardo Marquez <gmarquez@soelmonte.org>
Cc: Sam Wang <swang1@aqmd.gov>
Subject: Technical Data Request: South El Monte Athletic Fields and Business Park Project (South Coast AQMD Control Number: LAC250903-02)

You don't often get email from jafshar@aqmd.gov. Learn why this is important

CAUTION: This email originated from outside of the organization. Do not click links or open attachments unless you recognize the sender and know the content is safe.

Dear Mr. Marquez,
South Coast AQMD staff received the Draft Environmental Impact Report (DEIR) for the South El Monte Athletic Fields and Business Park Project (South Coast AQMD Control Number: LAC250903-02). Staff is currently in the process of reviewing the DEIR. The public commenting period is from August 28, 2025 to October 13, 2025. Upon review of the files provided as part of the public review period, we were able to access the PDF versions of the DEIR and Appendices via CEQAnet;
https://ceqanet.lci.ca.gov/2024070062/2
We respectfully request that you also provide electronic copies of the complete, **live** modeling and emissions calculation files used to quantify air quality impacts from construction and/or operation of the proposed project. Specifically, please include:

- CalEEMod input files (**.csv format**);
- Emission calculation files (**Excel format**; not PDF), including those related to truck operations or other project-related sources;
- AERMOD input and output files, including AERMOD View (**.isc**) files;
- If HARP was used, HARP input and output files and/or Excel files used to calculate cancer risk and chronic/acute hazards (**live files only**, no PDFs);
- Any additional files used for post-processing outside of AERMOD to calculate pollutant-specific concentrations, if applicable.

To ensure timely review, we request that these files be provided by **October 1, 2025**, via a Dropbox or other accessible download link. Without all files and supporting documentation, South Coast AQMD staff will be unable to complete a review of the air quality analyses in a timely manner. Any delays in providing all supporting documentation will require additional time for review beyond the end of the comment period.

A3-1

Best Regards,
Jivar Afshar *(she, her, hers)*
Air Quality Specialist,CEQA
Planning, Rule Development, & Implementation
(909)396-2040
Please note, South Coast AQMD is closed on Mondays.

Response A3-1

This is an introductory comment which states the South Coast Air Quality Management District (SCAQMD) is in the process of reviewing the Draft EIR for the proposed Project during the time of writing. The commenter requested that the City provide an electronic copy of any live modeling calculations files. The City supplied the requested files on September 30, 2025. This comment does not question the content or conclusions or adequacy of the Draft EIR and has been noted for the record.

Draft Environmental Impact Report (DEIR) for the
South El Monte Athletic Fields and Business Park (Proposed Project)
(SCH No: 2024070062)

South Coast Air Quality Management District (South Coast AQMD) staff appreciate the opportunity to review the above-mentioned document. The City of South El Monte is the California Environmental Quality Act (CEQA) Lead Agency for the Proposed Project. To provide context, South Coast AQMD staff has provided a brief summary of the project information and prepared the following comments which are organized by topic of concern.

A4-1

Summary of Proposed Project Information in the DEIR

Based on the DEIR, the Project involves development of a warehouse, a public park, and associated surface parking and landscaping on a 21.17-acre site. The warehouse component would occupy approximately 10.20 acres on the eastern portion of the site, while the future park component, to be dedicated to the City, would encompass approximately 10.97 acres on the northwestern portion of the site. The Project also includes installation of a digital billboard sign, approximately 70 feet in height with two displays, within the future park area on the northern portion of the site.[1]

The warehouse would have approximately 201,815 square feet (sf) of warehouse space, 10,000 sf of ancillary office on the first floor, and 10,000 sf of ancillary office on the mezzanine level for a total 221,815 sf of building space.[2] The building would have a total of 277 passenger vehicle parking spaces located along the northwest and southeast sides of the warehouse. The southeast parking lot would have 40 truck trailer parking spaces, allow access to the 27 dock doors, and be shielded by a 14-foot concrete screen wall. In addition, an 8-foot tall wrought iron fence would surround the perimeter of the warehouse site.[3]

A4-2

Project construction is anticipated with duration of approximately 12 months. Grading activities would require approximately 17,300 cubic yards of export.[4] The Project site is located at 825 Lexington-Gallatin Road in the City of South El Monte (City), County of Los Angeles, California.[5] Based on a review of aerial photographs, South Coast AQMD staff found that the nearest sensitive receptor (e.g., residential development) is located 40 feet to the southeast of the Project site.

[1] DEIR, Page 1.
[2] DEIR, Page 5.
[3] *Ibid.*
[4] DEIR, Page 6.
[5] DEIR, Page 1.

South Coast AQMD Comments

Import and/or Export Information During Construction

The Proposed Project's construction activities include site preparation, grading, building construction, paving, and architectural coating. The DEIR identifies that grading activities would require the export of approximately 17,300 cubic yards of earthwork materials.[6] However, the DEIR does not identify the specific servicing landfill or disposal site for exported materials, nor does it provide the distance between the Project site and the disposal location. In the CalEEMod modeling, a default haul truck travel distance of 20 miles was assumed.[7] If the actual disposal site is located farther than 20 miles from the Project site, the current modeling assumptions would underestimate emissions associated with hauling activities. To ensure accurate emissions estimates, it is recommended that the Lead Agency identify the specific landfill or soil export site that would serve the Project, document the haul distance, and update the CalEEMod assumptions accordingly.

A4-3

Concept Design and Orientation

Based on the DEIR, the Proposed project would have 27 dock doors[8] located on the south side of the building near Lexington-Gallatin Road.[9] Based on the aerial view, South Coast AQMD staff is concerned about the loading dock orientation of the Proposed Project. These loading docks face Lexington-Gallatin Road, where sensitive receptors (e.g., residences) are located. As a result, South Coast AQMD staff recommends that the Lead Agency re-consider the Proposed Project buildings' design/orientation, such as placing loading docks further away from the sensitive receptors, to help reduce the impacts of the operational activities on the sensitive receptors. In the event that the Proposed Project's design is revised, the Lead Agency should include the new design and its associated analysis (e.g., emissions calculations, HRA) in the Final EIR.

A4-4

Use of South Coast AQMD's Mass Rate Localized Significance Threshold (LST) Look-Up Table to Analyze the Proposed Project's Localized Air Quality Impact is not Consistent with Guidance for the LST Methodology

The localized significance threshold (LST) analysis in the DEIR appears to incorrectly rely on the LST screening tables to determine the significance of localized air quality impacts. As indicated in Table 3-2 of the LST methodology,[10] these screening tables are not applicable for projects larger than five acres. Since the Proposed Project site size is approximately 21 acres and is located in close proximity to sensitive receptors, including residential uses as noted earlier in this letter, reliance on the LST screening tables may underestimate localized air quality impacts. Therefore, it is recommended that the Lead Agency conduct project-specific dispersion modeling to accurately assess the localized air quality impacts from both construction and operational phases of the Proposed Project and include the results in the Final EIR.

A4-5

[6] Appendix C – Air Quality Assessment, page 6.
[7] Appendix C, page 127.
[8] DEIR, page 3-14.
[9] *Ibid*, Figure 3-8, page 3-13.
[10] South Coast AQMD Final Localized Significance Threshold Methodology available at: https://www.aqmd.gov/docs/default-source/ceqa/handbook/localized-significance-thresholds/final-lst-methodology-document.pdf

Consideration of Emergency Generator Emissions in Project Analysis

The Draft EIR indicates, for purposes of analysis, it conservatively assumed installation of diesel-powered backup emergency generator.[11] However, CalEEMod inputs do not include emergency generator in its analysis.[12] Omitting the emergency generator results in an underestimation of project emissions. Accordingly, it is recommended that the Lead Agency revise the CalEEMod inputs in the Final EIR to include the diesel-powered backup emergency generator and assume 200 hours per year of operation.

A4-6

It should be noted that South Coast AQMD permit for the emergency standby engine is required. Such permits typically establish a potential-to-emit (PTE) limit that allows operation of up to 200 hours per year, including a maximum of 50 hours per year for maintenance and testing.

Use of Outdated AERMOD and AERMAT Model Versions

According to the modeling files shared with South Coast AQMD's staff, it appears that AERMOD version 22112 and AERMET version 16216 were used for the health risk assessment (HRA) modeling. However, U.S. EPA's current preferred and recommended model versions, as of the latest release, are AERMOD version 24142 and AERMET version 24142, released in April 2024.[13] Use of outdated model versions is inconsistent with EPA's Guideline on Air Quality Models (40 CFR Part 51, Appendix W) and may result in inaccurate or non-conservative health risk estimates. To ensure accuracy, consistency with federal modeling guidelines, the Lead Agency should re-run the dispersion modeling using the most recent EPA-recommended versions of AERMOD and AERMET (version 24142) and revise the health risk results accordingly.

A4-7

Inconsistent AERMOD Emission Rate

Upon reviewing the AERMOD HRA modeling files, South Coast AQMD staff identified that a unit emission rate of 1 g/s was used for off-site and on-site trucks, emergency generator, and docks. whereas the actual emission factors from the on-site truck running and idling exhaust were applied to all other sources in the modeling. It is crucial to scale the modeled predicted ground-level concentrations to the actual ground-level concentration by using the actual emission rate to determine the actual cancer risks from the off-site trucks. The Lead Agency should verify that the estimated cancer risks from off-site trucks and the on-site truck running and idling exhaust are combined to calculate the total cancer risks.

A4-8

Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program

On May 7, 2021, South Coast AQMD's Governing Board adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program, and Rule 316 – Fees for Rule 2305. Rules 2305 and 316 are new rules that will reduce regional and local emissions of nitrogen oxides (NOx) and particulate matter (PM), including diesel PM. These

A4-9

[11] DEIR, page 4.7-15.
[12] DEIR, Appendix C, page 137.
[13] EPA's Air Quality Dispersion Modeling - Preferred and Recommended Models, Accessible at: https://www.epa.gov/scram/air-quality-dispersion-modeling-preferred-and-recommended-models

emission reductions will reduce public health impacts for communities located near warehouses from mobile sources that are associated with warehouse activities. Also, the emission reductions will help the region attain federal and state ambient air quality standards. Rule 2305 applies to owners and operators of warehouses greater than or equal to 100,000 square feet. Under Rule 2305, operators are subject to an annual WAIRE Points Compliance Obligation that is calculated based on the annual number of truck trips to the warehouse. WAIRE Points can be earned by implementing actions in a prescribed menu in Rule 2305, implementing a site-specific custom plan, or paying a mitigation fee. Warehouse owners are only required to submit limited information reports, but they can opt to earn Points on behalf of their tenants if they so choose because certain actions to reduce emissions may be better achieved at the warehouse development phase, for instance the installation of solar and charging infrastructure. Rule 316 is a companion fee rule for Rule 2305 to allow South Coast AQMD to recover costs associated with Rule 2305 compliance activities. Since the Proposed Project consists of the development of a 643,419 square foot warehouse, the Proposed Project's warehouse owners and operators will be required to comply with Rule 2305 once the warehouse is occupied. Therefore, South Coast AQMD staff recommends that the Lead Agency review South Coast AQMD Rule 2305 to determine the potential WAIRE Points Compliance Obligation for future operators and explore whether additional project requirements and CEQA mitigation measures can be identified and implemented at the Proposed Project that may help future warehouse operators meet their compliance obligation[14]. South Coast AQMD staff is available to answer questions concerning Rule 2305 implementation and compliance by phone or email at (909) 396-3140 or waire-program@aqmd.gov. For implementation guidance documents and compliance and reporting tools, please visit South Coast AQMD's WAIRE Program webpage.[15]

A4-9

Incompatible land use issue based on CARB and South Coast AQMD's guidance: sitting warehouses (proposed high-cube warehouse in four buildings) within close proximity to existing and new sensitive land uses (residential areas).

South Coast AQMD is concerned about the potential health impacts of siting the warehouse building in close proximity to existing sensitive land uses (high-density residential areas), since the operation of warehouse generates and attracts heavy-duty diesel-fueled trucks that emit Diesel Particulate Matter (DPM). Based on a review of aerial photographs, South Coast AQMD staff found that the nearest sensitive receptor, such as a mobile home park, is located at approximately 40 feet southeast of the Proposed Project site. Also, according to the DEIR, the truck routes and loading docks/truck idling will be located very close to existing residential areas (~40 feet). When the health impacts from the Proposed Project are added to the existing background, existing residents living in the surrounding communities will likely face even greater exposure to air pollution and bear a disproportionate burden of increasing health risks. According to CARB guidance, air pollution levels can be significantly higher within 500 feet (approximately 150 meters) of freeways or busy traffic corridors, adversely impacting human health. Consequently, the Lead Agency is recommended to follow CARB and South Coast AQMD land-use guidance to ensure that sensitive receptors are not heavily affected by the warehouse truck activities and freeway emissions. This guidance includes:

[15] South Coast AQMD WAIRE Program. Accessed at: http://www.aqmd.gov/waire.

1) The California Air Resources Board's (CARB) *Air Quality and Land Use Handbook: A Community Health Perspective*[16] is a general reference guide for evaluating and reducing air pollution impacts associated with new projects that go through the land use decision-making process with additional guidance on strategies to reduce air pollution exposure near high-volume roadways available in CARB's technical advisory.[17]

2) The South Coast AQMD's *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*[18] includes suggested policies that local governments can use in their General Plans or through local planning to prevent or reduce potential air pollution impacts and protect public health. It is recommended that the Lead Agency review this Guidance Document as a tool when making local planning and land use decisions. A4-10

By adhering to these essential guidance documents and implementing proactive Mitigation Measures (MMs), the lead agency can avoid, eliminate or reduce the adverse impacts of warehouse and truck activities on public health, ensuring that vulnerable communities are adequately protected from disproportionate exposure to air pollution.

Emission Reductions from Health Risk Strategies

South Coast AQMD is concerned about the potential public health impacts of siting existing and new sensitive populations within the proximity of existing air pollution sources (e.g., freeway, railroad). For this reason, prior to approving this Proposed Project as well as any future development projects, the Lead Agency is recommended to consider the impacts of air pollutants on people who will live in the new project area and provide effective mitigation. Additionally, South Coast AQMD suggests that the Lead Agency review and apply the guidance provided in: 1) the California Air Resources Board (CARB) Air Quality Land Use and Handbook: A Community Health Perspective[19] which provides criteria for evaluating and reducing air pollution impacts associated with new projects involving land use decisions; and 2) CARB's technical advisory which contains strategies to reduce air pollution exposure near high-volume roadways.[20] A4-11

Many strategies are available for residential receptors to reduce being exposed to particulate matter, including, but not limited to, HVAC systems equipped with filters rated at a minimum efficiency reporting value (MERV) 13 or higher air filtration capabilities. In some cases, MERV 15 or better is recommended, for building design, orientation, location, vegetation barriers, landscaping screening, etc. Enhanced filtration units are capable of reducing exposure. However, enhanced filtration systems have limitations. For example, filters rated MERV 13 or higher are

[18] South Coast AQMD. 2005. *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning*. Available at: http://www.aqmd.gov/docs/default-source/planning/air-quality-guidance/complete-guidance-document.pdf.
[19] California Air Resources Board (CARB), Air Quality Land Use and Handbook: A Community Health Perspective, April 2005. Available at: https://ww2.arb.ca.gov/sites/default/files/2023-05/Land%20Use%20Handbook_0.pdf
[20] CARB's Strategies to Reduce Air Pollution Exposure Near High-Volume Roadways. Available at: https://ww2.arb.ca.gov/sites/default/files/2017-10/rd_technical_advisory_final.pdf

able to screen out greater than or equal to 50% of DPM[21] but they have no ability to filter out volatile organic compound (VOC) emissions. Also, in a study that South Coast AQMD conducted to investigate filters rated at MERV 13 or better in classrooms,[22][23] a cost burden is expected to be within the range of $120 to $240 per year to replace each filter panel. The initial start-up cost could substantially increase if an HVAC system needs to be installed and if standalone filter units are required. Installation costs may vary, including costs for conducting site assessments and obtaining permits and approvals before filters can be installed. Other costs may include filter life monitoring, annual maintenance, and training for conducting maintenance and reporting. In addition, the filters would not have any effect unless the HVAC system is running. Therefore, when in use, the increased energy consumption from each HVAC system should be evaluated in the Final EIR. While the filters operate 100 percent of the time when the HVAC is in use while the residents are indoors, the environmental analysis does not generally account for the times when the residents are not using their HVAC and instead have their windows or doors open or are moving throughout the common space outdoor areas of the Proposed Project. Furthermore, when used filters are replaced with new filters, emissions associated with trucks delivering the new filters and waste disposal trucks transporting the used filters to disposal sites should be evaluated in the Final EIR. Therefore, any presumed effectiveness and feasibility of a particular HVAC filter should be carefully evaluated in more detail based on supporting evidence before assuming they will sufficiently alleviate exposure to DPM emissions.

A4-11

Additional Recommended Air Quality and Greenhouse Gases Mitigation Measures and Project Design Considerations

CEQA requires that all feasible mitigation measures that go beyond what is required by law be utilized to minimize or eliminate any significant adverse air quality impacts. To further reduce the Proposed Project's air quality impacts, South Coast AQMD recommends incorporating the following mitigation measures and project design considerations into the Final EIR.

Mitigation Measures for Operational Air Quality Impacts

Mobile Sources

A4-12

1. Require zero-emission (ZE) or near-zero emission (NZE) on-road haul trucks, such as heavy-duty trucks with natural gas engines that meet the CARB's adopted optional NOx emissions standard at 0.02 grams per brake horsepower-hour (g/bhp-hr), if and when feasible.

   Note: Given the state's clean truck rules and regulations aiming to accelerate the utilization and market penetration of ZE and NZE trucks, such as the Advanced Clean Trucks Rule and the Heavy-duty Low NOx Omnibus Regulation, ZE and NZE trucks will become increasingly more available to use.

[21] U.S. EPA, "What is a MERV rating?" Available at: https://www.https://www.epa.gov/indoor-air-quality-iaq/what-merv-rating.
[22] South Coast AQMD, Draft Pilot Study of High-Performance Air Filtration For Classroom Applications, October 2009. Available at: https://www.aqmd.gov/docs/default-source/ceqa/handbook/aqmdpilotstudyfinalreport.pdf.
[23] South Coast AQMD, Draft Pilot Study of High-Performance Air Filtration For Classroom Applications, October 2009. Available at: https://www.aqmd.gov/docs/default-source/ceqa/handbook/aqmdpilotstudyfinalreport.pdf.

2. Require a phase-in schedule to incentivize the use of cleaner operating trucks to reduce any significant adverse air quality impacts.

   Note: South Coast AQMD staff is available to discuss the availability of current and upcoming truck technologies and incentive programs with the Lead Agency.

3. Limit the daily number of trucks allowed at the Proposed Project to levels analyzed in the Final EIR. If higher daily truck volumes are anticipated to visit the site, the Lead Agency should commit to re-evaluating the Proposed Project through CEQA prior to allowing this higher activity level.

4. Provide electric vehicle (EV) charging stations or, at a minimum, provide electrical infrastructure, and electrical panels should be appropriately sized. Electrical hookups should be provided for truckers to plug in any onboard auxiliary equipment.

   Other Area Sources

   1. Maximize the use of solar energy by installing solar energy arrays.

   2. Use light-colored paving and roofing materials.

   3. Utilize only Energy Star heating, cooling, and lighting devices and appliances.

   Design Considerations for Reducing Air Quality and Health Risk Impacts

   1. Clearly mark truck routes with trailblazer signs so that trucks will not travel next to or near sensitive land uses (e.g., residences, schools, daycare centers, etc.).

   2. Design the Proposed Project such that truck entrances and exits are not facing sensitive receptors and trucks will not travel past sensitive land uses to enter or leave the Proposed Project site.

   3. Design the Proposed Project such that any truck check-in point is inside the Proposed Project site to ensure no trucks are queuing outside.

   4. Design the Proposed Project to ensure that truck traffic inside the Proposed Project site is as far away as feasible from sensitive receptors.

   5. Restrict overnight truck parking in sensitive land uses by providing overnight truck parking inside the Proposed Project site.

A4-12

Lastly, the South Coast AQMD also suggests that the Lead Agency conduct a review of the following references and incorporating additional mitigation measures as applicable to the Proposed Project in the Final EIR:

1. State of California – Department of Justice: Warehouse Projects: Best Practices and Mitigation Measures to Comply with the California Environmental Quality Act[24]

2. South Coast AQMD 2022 Air Quality Management Plan,[25] specifically:
   a) Appendix IV-A – South Coast AQMD's Stationary and Mobile Source Control Measures
   b) Appendix IV-B – CARB's Strategy for South Coast
   c) Appendix IV-C – SCAG's Regional Transportation Strategy and Control Measure
3. United States Environmental Protection Agency (U.S. EPA): Mobile Source Pollution - Environmental Justice and Transportation.[26]

A4-12

South Coast AQMD Air Permits and Role as a Responsible Agency

If implementation of the Proposed Project would require the use of new stationary and portable sources, including but not limited to emergency generators, fire water pumps, boilers, etc., air permits from South Coast AQMD will be required. The final CEQA document, should include a discussion about the potentially applicable rules that the Proposed Project needs to comply with. Those rules may include, for example, Rule 201 – Permit to Construct,[27] Rule 203 – Permit to Operate,[28] Rule 401 – Visible Emissions,[29] Rule 402 – Nuisance,[30] Rule 403 – Fugitive Dust,[31] Rule 1110.2 – Emissions from Gaseous and Liquid Fueled Engines,[32] Rule 1113 – Architectural Coating,[33] Regulation XIII – New Source Review,[34] Rule 1401 – New Source Review of Toxic Air Contaminants,[35] Rule 1470 – Requirements for Stationary Diesel-Fueled Internal Combustion and Other Compression Ignition Engines,[36] etc. It is important to note that when air permits from South Coast AQMD are required, the role of South Coast AQMD would change from a Commenting Agency to a Responsible Agency under CEQA. In addition, if South Coast AQMD is identified as a Responsible Agency, per CEQA Guidelines Sections 15086, the Lead Agency is required to consult with South Coast AQMD.

A4-13

For these reasons, the final CEQA document should be revised to include a discussion about any and all new stationary and portable equipment requiring South Coast AQMD air permits, provide

the evaluation of their air quality and greenhouse gas impacts, and identify South Coast AQMD as a Responsible Agency for the Proposed Project as this information will be relied upon as the basis for the permit conditions and emission limits for the air permit(s). Please contact South Coast AQMD's Engineering and Permitting staff at (909) 396-3385 for questions regarding what types of equipment would require air permits. For more general information on permits, please visit South Coast AQMD's webpage at https://www.aqmd.gov/home/permits.

A4-13

Conclusion

As set forth in California Public Resources Code Section 21092.5(a) and CEQA Guidelines Section 15088(a-b), the Lead Agency shall evaluate comments from public agencies on the environmental issues and prepare a written response at least 10 days prior to certifying the Final EIR. As such, please provide South Coast AQMD written responses to all comments contained herein at least 10 days prior to the certification of the Final EIR. In addition, as provided by CEQA Guidelines Section 15088(c), if the Lead Agency's position is at variance with recommendations provided in this comment letter, detailed reasons supported by substantial evidence in the record to explain why specific comments and suggestions are not accepted must be provided.

A4-14

Thank you for the opportunity to provide comments. South Coast AQMD staff is available to work with the Lead Agency to address any air quality questions that may arise from this comment letter. Please contact Jivar Afshar, Air Quality Specialist, at jafshar@aqmd.gov should you have any questions.

A4-15

Sincerely,

Sam Wang

Sam Wang
Program Supervisor, CEQA IGR
Planning, Rule Development & Implementation

Control Number

Response A4-1

This comment provides an introduction to the letter from the South Coast Air Quality Management District (SCAQMD). The comment is introductory in nature and does not raise a specific issue with the adequacy of the Draft EIR or raise any other CEQA issue. Therefore, no further response is required.

Response A4-2

The commenter provides a summary of the proposed Project. This comment does not raise a specific issue with the adequacy of the Draft EIR or raise any other CEQA issue. Therefore, no further response is required.

Response A4-3

The commenter states that the Draft EIR identifies 17,300 cubic yards of export, but does not specify the landfill that would receive the exported material. The commenter also notes that a default haul truck travel distance of 20 miles was assumed in CalEEMod. The Project's exported material would be transported to the Olinda Alpha Landfill, which is located approximately 20 miles from the project site. As CalEEMod currently reflects a 20-mile truck travel distance, no revisions to CalEEMod are required. The EIR has been updated to identify the Olinda Alpha Landfill and associated truck travel distance of approximately 20 miles on page 6 of Appendix C, Air Quality Assessment, of the EIR, as shown below.

> Grading activities would require approximately 17,300 cubic yards of export. Exported material would be transported to the Olinda Alpha Landfill, located approximately 20 miles from the project site. Construction of the Project would require the following phases: demolition, site preparation, grading, infrastructure improvements, paving, building construction, and architectural coatings.

Response A4-4

The commenter expresses concern regarding the orientation of the loading docks in relation to nearby sensitive receptors. The layout of the site and orientation of the proposed warehouse building is constrained due to the U.S. Army Corps of Engineers (USACE) flowage easement and feasible vehicular access to the site. The Project's design and site layout were developed to ensure efficient site circulation, truck access, and compliance with City development standards. The City acknowledges SCAQMD's recommendation, and this comment is noted for the record.

Further, the Draft EIR includes adequate dispersion modeling to estimate the potential cancer risk to nearby receptors, including sensitive receptors, from both Project construction and operational activities. On Draft EIR pages 4.2-18 and 4.2-19, the methodology for the dispersion modeling is explained. Construction dispersion modeling included all construction activity while operational modeling included idling of trucks at loading docks, on-site truck movement, off-site truck movement, off-road equipment including forklifts and cargo handling equipment, and one emergency generator. Risk was calculated using the Office of Environmental Health Hazard Assessment (OEHHA) methodology with age sensitivity factors and frequency of time spent at home (as shown in Draft EIR Appendix D page 21 in Table 3). Table 4.2-13 in the Draft EIR (page 4.2-31) presents the unmitigated scenarios for construction, operations, and combined for nearby residential, student, recreational, and worker receptors. As explained in the Draft EIR, both construction and operational cancer risk is less than 2 risk per one million for all receptors, which is significantly below the SCAQMD significance threshold of 10 per one million. Additionally, regional and

localized emissions were determined to be below SCAQMD thresholds; refer to Draft EIR pages 4.2-25, 4.2-28, and 4.2-29. Further, LST dispersion modeling determined that impacts would be less than significant; refer to Response A4-5. This comment is noted and will be provided to the City decision makers for review and consideration. The Draft EIR determined that air quality and health risk impacts would be less than significant and no evidence has been provided to the contrary. The comment does not raise a substantive issue with the Draft EIR's content or analytical methods and no further response is warranted.

Response A4-5

The commenter states that the localized significance thresholds (LST) analysis in the Draft EIR appears to incorrectly rely on SCAQMD LST screening tables that are not applicable to projects larger than five acres. The commenter recommends that the City conduct a project-specific dispersion modeling to assess the localized air quality impacts from both construction and operational phases of the Project.

For context, SCAQMD's LST guidance and corresponding thresholds are intended to assist CEQA lead agencies in evaluating a project's potential local air quality impacts. The guidance is based on dispersion modeling using local meteorological and air quality data within Source Receptor Areas (SRAs) to estimate pollutant concentrations and potential impacts to sensitive receptors. As noted by SCAQMD, LSTs represent "the maximum emissions from a project that will not cause or contribute to an exceedance of the most stringent applicable federal or state ambient air quality standard." The methodology accounts for project size, distance from receptors, and emission dispersion patterns, recognizing that smaller project areas or sites closer to sensitive receptors generally result in higher pollutant concentrations and greater potential local impacts.

As explained in Draft EIR Section 4.2: Air Quality, LSTs take into consideration emissions of NO_X, CO, PM_{10}, and $PM_{2.5}$ and LSTs for the Project were determined based on the closest distance of 25 meters, which is consistent with the SCAQMD LST methodology. Construction-generated emissions and operational-generated emissions associated with the Project were calculated using the CARB-approved California Emissions Estimator Model (CalEEMod), version 2022.1.

As explained in Draft EIR Section 4.2: Air Quality, since CalEEMod calculates construction emissions based on the number of equipment hours and the maximum daily soil disturbance activity possible for each piece of equipment, Draft EIR Table 4.2-10: Equipment-Specific Grading Rates was used to determine the maximum daily disturbed acreage for the LST analysis. It was also assumed that all construction equipment operated during each individual phase would be operated simultaneously, to provide a conservative analysis; see Draft EIR Appendix C for more information regarding the construction assumptions used in the Draft EIR analysis. Based on the daily construction equipment assumed for the Project and modeled in CalEEMod, Project construction is anticipated to disturb approximately 4 acres in a single day. As the SCAQMD LST guidance provides thresholds for projects disturbing 1-, 2-, and 5-acres in size and the thresholds increase with size of the site, the LSTs for a 4-acre threshold were interpolated and utilized for the Draft EIR analysis. Draft EIR Table 4.2-11: Localized Significance of Construction Emissions presents the unmitigated localized emissions during each construction phase. As shown in that table, the emissions of the applicable pollutants on the peak day of construction would not exceed the LSTs and therefore would not create substantial concentrations of pollutants at the sensitive receptors closest to the project site or cause or contribute to an exceedance of federal or State ambient air quality standards. Therefore, the Project would not result in any significant effects relating to localized construction air pollutant concentrations. No evidence has been provided to the contrary.

As explained in Draft EIR Section 4.2: Air Quality, according to the SCAQMD LST methodology, LSTs would apply to the operational phase of a project only if it includes stationary sources or attracts mobile sources that may spend long periods queuing and idling at the site (e.g. warehouse or transfer facilities). Since the Project includes a warehouse, the operational phase LST protocol was conservatively applied to both the area source and a portion of the mobile source emissions. The on-site operational emissions for the Project were calculated using CalEEMod and are compared to the LST thresholds in Draft EIR Table 4.2-12: Localized Significance of Operational Emissions. As shown in that table, the operational emissions of the applicable pollutants would not exceed the LSTs and therefore would not create substantial concentrations of pollutants at the sensitive receptors closest to the project site or cause or contribute to an exceedance of federal or State ambient air quality standards. Therefore, approval of the Project would not result in any significant effects relating to operational air pollutant concentrations. No evidence has been provided to the contrary.

As described above, the Draft EIR adequately analyzed localized air quality impacts and no evidence has been provided to the contrary. Nevertheless, the City conducted the additional LST dispersion modeling recommended by SCAQMD for informational purposes. It should be noted that the LST dispersion modeling conservatively assumes 200 operational hours for the emergency generator; refer to Response A4-6. As shown in **Attachment A: LST Dispersion Modeling,** to this Responses to Comments document, unmitigated localized construction and operational concentrations would not exceed SCAQMD's thresholds. Therefore, the results confirm the Draft EIR's finding that the Project would not exceed SCAQMD concentration-based LST standards and the Project would not result in a localized air quality impact. No evidence has been provided to the contrary. No changes to the EIR are required.

Response A4-6

This commenter asserts that the Draft EIR did not include emergency generator emissions in the CalEEMod modeling. As clarified here, emissions from a potential emergency generator were calculated using CalEEMod default emission factors in an external spreadsheet rather than within the CalEEMod model files themselves. These calculations were included in Appendix A, Air Quality Modeling Data, of Draft EIR Appendix C. Emergency generator emissions are also presented in Draft EIR Table 4.2-9 and Table 4.7-3.

The commenter further notes that SCAQMD permit conditions allow emergency generators to operate up to 200 hours per year, including a maximum of 50 hours per year for maintenance and testing. In the Draft EIR, emergency generator emissions were modeled based on 50 hours per year, which represents the legally enforceable limit for non-emergency maintenance and testing under the CARB Airborne Toxic Control Measure (ATCM) for Stationary Diesel Engines (California Code of Regulations, Title 17, §93115) and SCAQMD Rule 1470(c)(2)(C)(i). Accordingly, the use of 50 hours per year in the Draft EIR is appropriate under CEQA because it reflects the legally enforceable maximum number of hours a standby emergency generator may operate for non-emergency maintenance and testing, and therefore represents the most reasonably foreseeable operating scenario.

It should be noted that the Project is a speculative warehouse and does not propose installation of an emergency generator at this time. Any future warehouse end user choosing to install such equipment would be required to obtain a permit from SCAQMD and comply with all applicable regulatory limits, including the 50-hour annual cap for non-emergency operation. For purposes of providing a conservative

CEQA analysis, the Draft EIR assumed that the warehouse component of the Project could include an emergency backup generator operating up to 50 hours per year.

Notwithstanding the foregoing reasonable assumptions in the Draft EIR, the City has evaluated the commenter's request to assess emissions assuming 200 hours per year of emergency generator operation for informational purposes. Emissions associated with the hypothetical Project scenario of an emergency generator operating for 200 hours per year is shown in **Table A: Operational Criteria Pollutant Emissions**, **Table B: Localized Significance of Operational Emissions**, **Table C: Operational Greenhouse Gas Emissions**, **Table D: Carcinogenic Risk Assessment**, and **Table E: Chronic Hazard Assessment,** to this Responses to Comments document. As identified in **Table A** and **Table B**, even with an emergency generator operating 200 hours per year, the Project's operational emissions would remain below the applicable SCAQMD significance thresholds, resulting in a less than significant impact. Additionally, LST dispersion modeling results confirm that the Project's pollutant concentrations would not exceed SCAQMD concentration-based LST thresholds; refer to Response A4-5. Therefore, air quality impacts would be less than significant, consistent with the Draft EIR findings. Additionally, **Table C** shows that greenhouse gas (GHG) emissions would remain above the SCAQMD significance threshold resulting in a significant and unavoidable impact, which is consistent with the Draft EIR findings. Further, **Table D** and **Table E** show that cancer risk and chronic hazards are below the applicable SCAQMD thresholds resulting in a less than significant health risk impact, which is consistent with the Draft EIR findings. Emergency generator emission calculations and modeling files can be found in **Attachment B, Generator Modeling (200 hours)** to this Response to Comments document. As summarized above, the foregoing does not alter the Draft EIR's conclusions and no changes to the Draft EIR are required. No evidence has been provided to the contrary.

Table A: Operational Criteria Pollutant Emissions

Source	Maximum Pounds Per Day[1]

1. The concentration and chronic hazard presented in this table are from Draft EIR Table 4.2-14, with the exception of the emergency generator. Refer to **Attachment B, Generator Modeling (200 hours)** of this Response to Comments document, for emergency generator emissions calculations.
2. The emergency generator concentration and chronic hazard assumes 200 hours per year, or 3.8 hours per day.

Response A4-7

The commenter suggests that the Draft EIR Health Risk Assessment used outdated AERMOD and AERMET versions, which may produce inaccurate risk estimates, and recommends rerunning the modeling with the U.S. Environmental Protection Agency's (U.S. EPA) most current AERMOD and AERMET versions. At the time the Notice of Preparation (NOP) was circulated on July 2, 2024, the versions of AERMOD (Version 23132) and AERMET (Version 16216) were the most current versions at that time and were appropriately used in accordance with U.S. EPA and CEQA Guidelines. Furthermore, the updated versions of AERMOD and AERMET (Version 24142) were not effective at the time of modeling for the Draft EIR and the effective dates were delayed until March 21, 2025.[1] Therefore, pursuant to CEQA Guidelines Section 15064(b), which requires use of the best available and current scientific data at the time of analysis, the modeling appropriately relied on the versions of the dispersion modeling system available at the time of the modeling for the Draft EIR. No changes to the EIR are required.

[1] U.S. EPA, *2024 Appendix W Final Rule*, https://www.epa.gov/scram/2024-appendix-w-final-rule?utm, accessed November 17, 2025.

Response A4-8

The commenter states that a unit emission rate of 1 gram per second (g/s) was applied to off-site and on-site trucks, the emergency generator, and docks, while actual emission rates for on-site truck running and idling exhaust were applied to all other sources in the Health Risk Assessment modeling and recommends using actual emission rates and combining cancer risks from off-site trucks and on-site truck operations to determine total cancer risk. The commenter's statement is incorrect. As detailed in Appendix A of Draft EIR Appendix D, Health Risk Assessment, unitized emission rates were applied in AERMOD for all sources. Each source was modeled using a unitized emission rate to estimate ground-level concentrations in micrograms per cubic meter ($\mu g/m^3$) at each receptor. The total unitized emission rate sums to 1 g/s per source group, not per individual source. Individual sources within each group were proportionally scaled based on their respective source areas. For example, in the HAUL source group, four line-volume sources (HAUL1, HAUL2, HAUL3, and HAUL4) were assigned unitized emission rates that collectively sum to 1 g/s, with each source's contribution scaled to its source area, as shown below and in Appendix A of Draft EIR's Appendix D, Health Risk Assessment.

Off-Site Source	Emission Rate (g/s)	Source Area (m^2)	AERMOD Unitized Rate (g/s)
HAUL1	4.41E-06	9.05E+03	0.3773
HAUL2	7.39E-06	3.89E+03	0.1620
HAUL3	1.70E-05	7.81E+03	0.3258
HAUL4	1.10E-05	3.23E+03	0.1348
Total	*3.98E-05*	NA	*1*
Notes: NA = Not Applicable			

AERMOD output concentrations were then used as dispersion (scaling) factors. These dispersion factors ($\mu g/m^3$ per unitized g/s) were multiplied by the actual emission rate (in g/s) for each source group to calculate ground-level concentrations at each receptor. In other words, the total actual emission rate for each source group was applied to the corresponding AERMOD output to determine the final concentration contributed by that group at each receptor. The combined cancer risks from all sources is shown in Draft EIR Table 4.2-13. The detailed calculations converting unitized emission rates to concentrations for all modeled sources is provided in Appendix A of Draft EIR Appendix D, Health Risk Assessment.

Because the Draft EIR used a technically appropriate modeling approach consistent for all sources and combined the cancer risk for all sources, the commenter's statement is incorrect. No evidence has been provided to the contrary. No changes to the EIR are required.

Response A4-9

The commenter discusses the adopted Rule 2305 – Warehouse Indirect Source Rule – Warehouse Actions and Investments to Reduce Emissions (WAIRE) Program and Rule 316 – Fees for Rule 2305, which is required for all projects within the SCAQMD's jurisdiction. As discussed on pages 4.7-20 and 4.7-27 of the Draft EIR, the Project would comply with SCAQMD Rule 2305 in that as noted by the commenter, the Project's warehouse owner and operators will be required to comply with Rule 2305 once the warehouse is occupied. As explained in the Draft EIR, warehouse operators that do not earn a sufficient number of WAIRE points to satisfy the WAIRE Points Compliance Obligation would be required to pay a mitigation

fee, pursuant to Rule 316. As noted by the commenter, warehouse owners can opt to earn WAIRE points on behalf of their tenants by, for instance, installing solar and charging infrastructure, and the commenter suggests that such measures should be considered in the EIR. As explained in Draft EIR, MM GHG-2 provides: "The Project (warehouse) shall install solar photovoltaic (PV) panels or other source of renewable energy generation on the site or otherwise acquire energy from the local utility that has been generated by renewable sources, that would provide 100 percent of the expected building load. (i.e., the Title 24 electricity demand and the plug-load, anticipated to be approximately 5.75 kilowatt hours per year [kWh/year] per square foot)." Furthermore, MM GHG-3 provides: "The Project (warehouse and City park) shall provide facilities to support electric charging stations per the Tier 2 standards in Section A5.106.5.3 (Nonresidential Voluntary Measures) of the 2022 CALGreen Code." These improvements will be factored into Rule 2305 compliance once the warehouse is occupied. The comment has been noted for the record and no changes to the EIR have been made or are required. No evidence has been provided to the contrary.

Response A4-10

The commenter states in part, "South Coast AQMD is concerned about the potential health impacts of siting the warehouse building in close proximity to existing sensitive land uses (high-density residential areas), since the operation of warehouse generates and attracts heavy-duty diesel-fueled trucks that emit Diesel Particulate Matter (DPM). Based on a review of aerial photographs, SCAQMD staff found that the nearest sensitive receptor, such as a mobile home park, is located at approximately 40 feet southeast of the Proposed Project site." As a mobile home park is not located near the project site, the commenter's statement is incorrect. The commenter also recommends that the Lead Agency follow CARB and SCAQMD land-use guidance and implement mitigation measures to reduce air pollution exposure and protect public health. As explained in Section 4.2: Air Quality of the Draft EIR and below, the City did follow CARB and SCAQMD land use guidance and it was accurately determined that potential air quality impacts related to sensitive receptors would be less than significant. No evidence has been provided to the contrary.

The CARB *Air Quality and Land Use Handbook* (Handbook) states that to determine the actual risk near a particular facility, a site-specific analysis would be required. The SCAQMD *Guidance Document for Addressing Air Quality Issues in General Plans and Local Planning* (Guidance) recommends that health risks from mobile source DPM at facilities such as warehouse distribution centers should be analyzed in accordance with their *Health Risk Assessment Guidance for Analyzing Cancer Risks from Mobile Source Diesel Idling Emissions for CEQA Air Quality Analysis*.

Consistent with these recommendations, a Health Risk Assessment (HRA) was prepared for the warehouse component of the Project; refer to Draft EIR Section 4.2: Air Quality. The HRA determined that project-related health risks would not exceed the SCAQMD threshold of 10 in one million. The SCAQMD has established an incidence rate of 10 in one million as the maximum acceptable incremental cancer risk due to toxic air contaminant (TAC) exposure. This threshold is an upper-bound incremental probability to determine whether or not a given project has a potentially significant development-specific and cumulative impact and to ensure an individual new source does not contribute a cumulatively significant impact. As documented in Draft EIR Table 4.2-13: Carcinogenic Risk Assessment, project-related health risks for nearby sensitive receptors would range from 0.01 to 1.9 in one million, which is significantly below the SCAQMD threshold of 10 in one million.

Additionally, regional and localized emissions were determined to not exceed applicable SCAQMD thresholds. As noted in Draft EIR page 4.2-23, SCAQMD considers projects that do not exceed the project-specific individual incremental thresholds to not be cumulatively significant.

As this comment does not raise a substantive issue regarding the adequacy of the Draft EIR, the comment has been noted for the record and no changes to the EIR have been made or are required.

Response A4-11

The commenter expresses concern regarding potential public health impacts from siting sensitive populations near existing sources of air pollution, such as freeways and railroads, and recommends evaluating and mitigating exposure using strategies such as enhanced HVAC filtration. Specifically, the commenter states, "the Lead Agency is recommended to consider the impacts of air pollutants on people who will live in the new project area and provide effective mitigation." The commenter also advises the Lead Agency to consult and apply relevant CARB guidance documents, including the Air Quality and Land Use Handbook and CARB's technical advisory on reducing exposure near high-volume roadways.

The Project proposes the development of a warehouse and future City park. As such, there are no on-site residential receptors that would be exposed to mobile-source diesel particulate matter (DPM) or other air pollutants from the Project itself. Notwithstanding, the Draft EIR evaluated potential air quality and health risk impacts at the nearest sensitive receptors, which included future on-site City park receptors. As discussed in Response A4-10, health risk and air quality emissions would not exceed appliable SCAQMD thresholds and were found to be less than significant. No evidence has been provided to the contrary. Because the Project does not introduce new residential receptors on the project site, the commenter's recommendations regarding indoor filtration or other exposure reduction strategies for residential receptors are not applicable, and no revisions to the EIR are required.

Response A4-12

The commenter provides a list of additional recommended mitigation measures to reduce the Project's operational-related air quality impacts. As explained above and as shown in Table 4.2-9 of the Draft EIR, the Project's operational emissions would not exceed SCAQMD thresholds, resulting in a less than significant impact. No evidence has been provided to the contrary. CEQA Guidelines Section 15126.4(a)(3) states that mitigation measures are not required for effects which are not found to be significant. For informational purposes, see Response A4-9 for information about on-site facilities to support electric charging stations and the installation of solar photovoltaic (PV) panels or other source of renewable energy generation on the warehouse site. As the Project's operational-related air quality emissions would not exceed the applicable thresholds, additional mitigation is not required under CEQA. No changes to the EIR have been made or are required.

Response A4-13

The commenter states that if the Project requires the use of new stationary and portable sources, including but not limited to emergency generators, fire water pumps, etc., air permits from SCAQMD will be required, and the role of SCAQMD would change from a Commenting Agency to a Responsible Agency under CEQA.

As explained in Response A4-6, emissions from an emergency generator was included in the air quality and greenhouse gas emissions analyses in order to analyze a worst-case scenario, but it is not known at

this time whether the future warehouse operator would install an emergency generator; refer to Draft EIR Section 4.2 and Section 4.7. Following construction of the Project, any future tenant that requires the use of an emergency generator or stationary equipment with an internal combustion engine would be required to obtain permits from SCAQMD prior to installation.

SCAQMD typically acts as lead agency for its own projects or permit projects filed with the SCAQMD where the SCAQMD has primary approval authority over the project. As separately explained by SCAQMD, it is not a lead agency for land use projects such as shopping malls, housing tracts, commercial or industrial parks, sports stadiums, etc. For these types of projects, the SCAQMD has no jurisdictional approval authority.[2]Therefore, SCAQMD would remain a Commenting Agency and is not considered a Responsible Agency.

Response A4-14

The commenter states that the Lead Agency must evaluate comments and recommendations from public agencies on the EIR. Refer to Response A4-1 through Response A4-13 above. The issues raised in these comments have been addressed in sufficient detail, and the City's responses have been provided in good faith, and contain reasoned analysis, based on substantial evidence in the record.

The commenter requests that the City comply with CEQA when responding to SCAQMD's comments. As requested, the City's responses to SCAQMD's comments will be sent to the SCAQMD as part of the Final EIR distribution prior to certification of Final EIR.

As the comment does not raise any issues with respect to the content and adequacy of the Draft EIR or the Project's environmental effects, no further response is warranted. The comment is included here to provide a complete record of the SCAQMD's letter. The comment will become part of the administrative record and will be considered by the decision-makers.

Response A4-15

The comment includes conclusionary statements and therefore, no further response is warranted.

RE: South El Monte Athletic Fields and Business Park Project – DEIR
SCH# 2024070062
GTS# 07-LA-2024-04892
Vic. LA 60 PM: 10.192

Dear Jocelyn Swain,

Thank you for including the California Department of Transportation (Caltrans) in the environmental review process for the above referenced project. The Project would include the development of a warehouse use on approximately 10.5 acres of the eastern portion of the site and the remaining approximately 10.7 acres on the northwestern portion of the site would be dedicated to the City for future development of a City park and a digital billboard. The Project includes the construction of storage and drainage improvements for the required volume of potential flood waters from the Whittier Flood Control Basin by balancing the cut and fill up to the spillway activation elevation of the Whittier Narrows Dam, as defined by the U.S. Army Corps of Engineers (USACE). The proposed warehouse and the future City park would be designed to accommodate the Storage Basin Improvements. The warehouse component of the Project would include the construction of an approximately 221,815-square-foot (sf) single-story industrial warehouse building with approximately 201,815 sf of warehouse space, approximately 10,000 sf of ancillary office space on the ground level, and approximately 10,000 sf of ancillary office space on a mezzanine level. The warehouse would include 27 dock doors and 277 standard parking stalls. Access to the warehouse would be provided via two 40-foot-wide driveways on Lexington-Gallatin Road which would allow for truck and passenger vehicle ingress/egress to the site and allow for truck turning movements. The remaining approximately 10.7 acres in the northwest portion of the project site would be dedicated to the City for future development of a public City park. The EIR evaluates the conceptual plan of the future City park assuming two athletic fields, open lawn areas,

A5-1

"Provide a safe and reliable transportation network that serves all people and respects the environment."

public surface parking, restroom facilities, and site access via one driveway off Santa Anita Avenue.

A5-1

After reviewing the DEIR, Caltrans has the following comments:

Due to the project's adjacency to SR 60, please be aware that any project work occurring within, or abutting Caltrans ROW will require an encroachment permit and all concerns and requirements must be addressed. This includes any grading, topography, or equipment work that will change the pattern or direction of water runoff in a way that will impact State facilities or ROW.

If evidence of the above is discovered during the City's review of the project's various permit and design approvals, a condition of approval for City issued entitlements shall include a requirement to work with Caltrans' Office of Permits to obtain the appropriate encroachment permits. Final design requirements for any proposed changes to infrastructure within or along Caltrans Right-of-way will be determined by the Office of Permits. At the time of permit application there will be rounds of review and corrections to ensure all design, Right-of-way, access management, water runoff, environmental, and statutory requirements are being addressed.

A5-2

Caltrans District 7 Office of Permits contact information:
Mailing Address: 100 S Main Street, Ste 100 Los Angeles, CA 90012
Office Hours: 8:00 a.m. to 5:00 p.m. Monday-Friday
Phone: 213-897-3631 | Fax: 213-897-0420 | E-mail: D7.Permits@dot.ca.gov

A5-3

Please note that the future digital billboard will require an Outdoor Advertising Display (ODA) Permit from Caltrans. Please access the following link for further ODA information: https://dot.ca.gov/programs/traffic-operations/oda

A5-4

Finally, any transportation of heavy construction equipment and/or materials which requires use of oversized-transport vehicles on State highways will require a Caltrans transportation permit. We recommend large size truck trips be limited to off-peak commute periods.

A5-5

If you have any questions, please contact project coordinator Anthony Higgins, at anthony.higgins@dot.ca.gov and refer to GTS# 07-LA-2024-04892.

A5-6

Sincerely,

Miya Edmonson

Miya Edmonson
LDR Branch Chief

"Provide a safe and reliable transportation network that serves all people and respects the environment"

Response A5-1

The commenter provides a summary of the Project. This comment does not raise a specific issue with the adequacy of the Draft EIR or raise any other CEQA issue. Therefore, no further response is required.

Response A5-2

The commenter states that any Project work occurring within or abutting Caltrans right-of-way will require an encroachment permit; final design requirements for any proposed changes to infrastructure within or along Caltrans right-of-way will be determined by the Office of Permits; and at the time of permit application there will be rounds of review and corrections to ensure all design, right-of-way, access management, water runoff, environmental, and statutory requirements are addressed. This comment is noted. The comment does not address the adequacy of the Draft EIR or raise any CEQA issues; no further response is required.

Response A5-3

The commenter provides contact information for the Caltrans District 7 Office of Permits. This comment does not raise a specific issue with the adequacy of the Draft EIR or raise any other CEQA issue. Therefore, no further response is required.

Response A5-4

The commenter states that the digital billboard proposed as part of the Project will require an Outdoor Advertising Display (ODA) permit from Caltrans. This comment is noted and this requirement is acknowledged by the City. Section 3.0: Project Description of the Draft EIR identifies the need for coordination with Caltrans and issuance of a permit for outdoor advertising under the Outdoor Advertising Act. The comment does not address the adequacy of the Draft EIR or raise any CEQA issues; this comment is noted for the record and no further response is required.

Response A5-5

The commenter states that any transportation of heavy construction equipment and/or materials which requires the use of oversized-transport vehicles on State highways will require a Caltrans transportation permit and recommends that large size truck trips be limited to off-peak commute periods. This comment is noted and this requirement is acknowledged by the City. The comment does not address the adequacy of the Draft EIR or raise any CEQA issues; no further response is required.

Response A5-6

The commenter provides contact information for the Caltrans' project coordinator for any questions. This comment is conclusionary in nature and does not raise a specific issue with the adequacy of the EIR or raise any other CEQA issue. Therefore, no further response is required.

4.0 CLARIFICATIONS AND REVISIONS

This section includes recommended clarifications and revisions to the Draft EIR. This section is organized by respective sections of the EIR. Deleted text is shown as strikeout and new text is underlined.

Global Change

The following "global change" is intended to apply to the Draft EIR in all instances where such text shown below appears within the document. The text revisions are not repeated herein for each occurrence within the Draft EIR in order to streamline this document. This clarification does not affect the findings of the EIR. The EIR has been revised to clarify references to the warehouse building height and is incorporated into the Final EIR as follows:

- The proposed structure would be a concrete tilt up warehouse building and would have a ~~varying~~ roof line of approximately 45 feet to 50 feet in height ~~with~~ to accommodate an internal clear height of 40 feet.

Appendix C: Air Quality Assessment

The last paragraph on Page 6 of the Appendix C has been revised to disclose the Olinda Alpha Landfill and associated truck travel distance as follows:

> Grading activities would require approximately 17,300 cubic yards of export. Exported material would be transported to the Olinda Alpha Landfill, located approximately 20 miles from the project site. Construction of the Project would require the following phases: demolition, site preparation, grading, infrastructure improvements, paving, building construction, and architectural coatings.

On-site Mobile % factor	Trucks	Passegner
On-Site Trip Length (miles)	0.15	0.33
Total Trip Length (miles)	33.20	6.13
% factor	0.45%	5.38%

Conversions:

1 day = 86400 seconds
1 pound = 453.5924 grams

Notes:

All emissions are from Draft EIR *Appendix C , Air Quality Assessment* , with the exception of generator emissions. Generator emissions have been modeled to conservatively include 200 operational hours.

Emergency Backup Generator Emissions

	Fuel Type	Quantity	HP	LF	Hours/Year per Unit	Hours per Day	HP-hr per day	Total hp-hr per year
Backup Generator	Diesel	1	300	0.74	200	3.8	854	44,400

- - - - - - - - - - - - - - - - - - - - -

 ** Model Options Selected:
      * Model Uses Regulatory DEFAULT Options
      * Model Is Setup For Calculation of Average CONCentration Values.
      * NO GAS DEPOSITION Data Provided.
      * NO PARTICLE DEPOSITION Data Provided.
      * Model Uses NO DRY DEPLETION. DDPLETE  =  F
      * Model Uses NO WET DEPLETION. WETDPLT  =  F
      * Stack-tip Downwash.
      * Model Accounts for ELEVated Terrain Effects.
      * Use Calms Processing Routine.
      * Use Missing Data Processing Routine.
      * No Exponential Decay.
      * Model Uses URBAN Dispersion Algorithm for the SBL for   485 Source(s),
        for Total of    1 Urban Area(s):
```

```
   Urban Population =     19602.0 ;  Urban Roughness Length =  1.000 m
      * Urban Roughness Length of 1.0 Meter Used.
      * ADJ_U*   - Use ADJ_U* option for SBL in AERMET
      * TEMP_Sub - Meteorological data includes TEMP substitutions
      * Model Accepts FLAGPOLE Receptor . Heights.
      * The User Specified a Pollutant Type of: PM_2.5

 **Model Calculates  1 Short Term Average(s) of:  24-HR

 **This Run Includes:    485 Source(s);       3 Source Group(s); and     331
Receptor(s)

                with:      0 POINT(s), including
                           0 POINTCAP(s) and      0 POINTHOR(s)
                 and:    484 VOLUME source(s)
                 and:      1 AREA type source(s)
                 and:      0 LINE source(s)
                 and:      0 RLINE/RLINEXT source(s)
                 and:      0 OPENPIT source(s)
                 and:      0 BUOYANT LINE source(s) with a total of     0 line(s)
                 and:      0 SWPOINT source(s)

 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    58.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      4.0 MB of RAM.

 **Input Runstream File:          aermod.inp

 ***
 - - -

```
 **Model Set To Continue RUNning After the Setup Testing.

 **The AERMET Input Meteorological Data Version Date:  16216

 **Output Options Selected:
          Model Outputs Tables of Highest Short Term Values by Receptor (RECTABLE
Keyword)
          Model Outputs External File(s) of High Values for Plotting (PLOTFILE
Keyword)
          Model Outputs Separate Summary File of High Ranked Values (SUMMFILE
Keyword)

 **NOTE:  The Following Flags May Appear Following CONC Values:  c for Calm Hours
                                                                 m for Missing Hours
                                                                 b for Both Calm and
Missing Hours

 **Misc. Inputs:  Base Elev. for Pot. Temp. Profile (m MSL) =    58.00 ;  Decay
Coef. =    0.000     ;  Rot. Angle =     0.0
                  Emission Units = GRAMS/SEC                                ;
Emission Rate Unit Factor =   0.10000E+07
                  Output Units   = MICROGRAMS/M**3

 **Approximate Storage Requirements of Model =      4.3 MB of RAM.

 **Input Runstream File:          aermod.inp

 **Output Print File:             aermod.out

 **Detailed Error/Message File:   PM25_CON.ERR
